

# 1. College Essay

**Prompt:** Please submit a one-page, single-spaced essay that explains why you have chosen State University and your particular major(s), department(s) or program(s).

State University and I possess a common vision. I, like State University, constantly work to explore the limits of nature by exceeding expectations. Long an amateur scientist, it was this drive that brought me to the University of Texas for its Student Science Training Program in 2013. Up to that point science had been my private past time, one I had yet to explore on anyone else's terms. My time at UT, however, changed that. Participating for the first time in a full-length research experiment at that level, I felt more alive, more engaged, than I ever had before. Learning the complex dynamics between electromagnetic induction and optics in an attempt to solve one of the holy grails of physics, gravitational-waves, I could not have been more pleased. Thus vindicated, my desire to further formalize my love of science brings me to State University. Thanks to this experience, I know now better than ever that State University is my future, because through it I seek another, permanent, opportunity to follow my passion for science and engineering.

In addition to just science, I am drawn to State University for other reasons. I strive to work with the diverse group of people that State University wholeheartedly accommodates – and who also share my mind set. They, like me, are there because State University respects the value of diversity. I know from personal experience that in order to achieve the trust, honesty, and success that State University values, new people are needed to create a respectful environment for these values. I feel that my background as an American Sikh will provide an innovative perspective in the university's search for knowledge while helping it to develop a basis for future success. And that, truly, is the greatest success I can imagine.

This emphasis on diversity can also be found in the variety of specialized departments found at State University. On top of its growing cultural and ethnic diversity, State University is becoming a master at creating a niche for every student. However, this does not isolate students by forcing them to work with only those individuals who follow their specific discipline. Instead, it is the seamless interaction between facilities that allows each department, from engineering to programming, to create a real learning environment that profoundly mimics the real world. Thus, State University is not just the perfect place for me, it is the only place for me. Indeed, having the intellectual keenness to absorb every ounce of knowledge presented through my time in the IB program, I know that I can contribute to State University as it continues to cultivate a scholarly climate that encourages intellectual curiosity.

At the Department of Electrical and Computer Engineering at State University, I will be able to do just that. In a department where education and research are intermixed, I can continue to follow the path that towards scientific excellence. Long-mesmerized by hobbies like my work with the FIRST Robotics team, I believe State University would be the best choice to continue to nurture my love for electrical and computer engineering. I have only scratched the surface in this ever evolving field but know that the technological potential is limitless. Likewise, I feel that my time at State University would make my potential similarly limitless.

## 2. College Essay

**Prompt:** What motivates you?

For as long as I can remember, I have dreamed of science. Where others see the engineering, experimentation, and presentation of science as a chore, I only see excitement. Even as a child I constantly sought it out, first on television with Bill Nye and The Mythbusters, then later in person in every museum exhibit I could find. Science in all its forms fascinated me, but science projects in particular were a category all to themselves. To me, science projects were a special joy that only grew with time. In fact, it was this continued fascination for hands-on science that brought me years later to the sauna that is the University of Alabama in mid-June. Participating in the Student Science Training Program and working in their lab made me feel like a kid in a candy store. Just the thought of participating in a project at this level of scientific rigor made me forget that this was supposed to be my summer break and I spent the first day eagerly examining every piece of equipment.

Even at first, when the whole research group sat there doing rote calculations and others felt like they were staring down the barrel of defeated purpose, I remained enthusiastic. Time and time again I reminded myself of that famous phrase "great effort leads to great rewards," and sure enough, soon my aspirations began to be met. This shift in attitude also coincided with a shift in location: from the computer desk to the laser lab. It was finally time to get my hands dirty.

Now things began to get really interesting. During the experimentation phase of the project, I spent the majority of my waking hours in the lab – and I enjoyed every minute of it. From debriefing with my coordinator in the morning to checking and rechecking results well into the afternoon, I was on cloud nine all day, every day. I even loved the electric feeling of anxiety as I waited for the results. Most of all, though, I loved the pursuit of science itself. Before I knew it, I was well into the seventh week and had completed my first long-term research experiment.

In the end, although the days were long and hard, my work that summer filled me with pride. That pride has confirmed and reinvigorated my love for science. I felt more alive, more engaged, in that lab than I have anywhere else, and I am committed to returning. I have always dreamed of science but since that summer, since my experiment, I have dreamed only of the future. To me, medical science is the future and through it I seek another, permanent, opportunity to follow my passion. After all, to follow your passion is, literally, a dream come true.

In addition to its use of clear, demonstrative language, there is one thing that makes this an effective essay: focus. Indeed, notice that, although the question is broad, the answer is narrow. This is crucial. It can be easy to wax poetic on a topic and, in the process, take on too much. Instead, by highlighting one specific aspect of his personality, the author is able to give the reader a taste of his who he is without overwhelming him or simply reproducing his résumé. This emphasis gives the reader the opportunity to learn who the writer is on his terms and makes it a truly compelling application essay.
